

GEORGE CREEK
RIVER DISTRIBUTION SYSTEM

1962 ASSESSMENT

\$ 350.00

Forward: This distribution system came under the supervision of the State Engineer in accordance with Court Action and the first distribution portion of the State Engineer was accomplished at the Annual George Creek Water Users Meeting held in Yost, Utah at 1:00 PM April 7, 1960.

BASIS OF ASSESSMENT:

1. The 1962 Assessment is based upon an acre-foot delivery during 1961. High water interest will be assessed only if the highwater is delivered to their rights. The peak flow of George Creek did not rise above 66.00 CFS, Therefore, the high-water rights will not be assessed.

CALCULATION OF ASSESSMENT:

It was reported that 1,205.28 acre-feet of water was used during 1961. \$ 350.00 divided by 1,205.28 equals \$ 0.290388955 cost for one pro-rata acre-foot of water. This cost multiplied times the reported amount of water used by each water user on the George Creek Distribution System equals their pro-rated share of the 1962 Assessment.

PROOF:

\$ 0.290388955 times 1,205.28 equals \$ 350.00

Wallace Spencer: 537.50 AcFt times \$ 0.290388955 equals \$ 156.08

George Creek Irr. Co. 667.78 AcFt times \$0.290388955 equals 193.92

TOTAL 1962 ASSESSMENT \$ 350.00
